

[Nessus 8.6.0 Crack](#)

The screenshot shows the Nessus PS web interface. The top navigation bar includes the Nessus PS logo, "Scans 5", "Schedules", "Policies", and a user profile "jman@tenable.com". The main content area is titled "Policies" and shows a "New Heartbleed Detection Policy / Step 2 of 2" configuration screen. On the left, a sidebar lists "Step 1" and "Step 2", with "Step 2" selected. The main panel contains a numbered instruction: "2 This policy is used to perform a remote check for the Heartbleed vulnerability (CVE-2014-0160) on all ports where SSL is detected. 'Quick' scans a limited number of ports and only attempts to detect SSL on ports where it is commonly used. 'Normal' scans more ports, using the default Nessus port scan range. 'Thorough' scans all 65,535 ports and attempts to detect SSL on all open ports. Specify the type of scan to perform:". Below this text is a dropdown menu labeled "Scan type" with three options: "Thorough", "Quick", and "Normal". The "Thorough" option is currently selected and highlighted. At the bottom left of the configuration area are "Save" and "Cancel" buttons.
